Introduction

What is it about?

Development of a structure-preserving idealized stochastic climate model

What is it about?

Development of a structure-preserving idealized stochastic climate model

▶ Climate model: set of equations modeling climatic events/processes

What is it about?

Development of a structure-preserving idealized stochastic climate model

- ▶ Climate model: set of equations modeling climatic events/processes
  - ▶ Our model: simulates ocean-atmosphere interactions

What is it about?

Development of a structure-preserving idealized stochastic climate model

▶ Climate model: set of equations modeling climatic events/processes
  ▶ Our model: simulates ocean-atmosphere interactions
▶ Idealized: we make approximations!

What is it about?

Development of a structure-preserving idealized stochastic climate model

- ▶ Climate model: set of equations modeling climatic events/processes
  - ▶ Our model: simulates ocean-atmosphere interactions
- ▶ Idealized: we make approximations!
  - ▶ 2D model: solves for velocity, temperature, and pressure

What is it about?

Development of a structure-preserving idealized stochastic climate model

▶ **Climate model:** set of equations modeling climatic events/processes
  ▶ Our model: simulates ocean-atmosphere interactions

▶ **Idealized:** we make approximations!
  ▶ 2D model: solves for velocity, temperature, and pressure

▶ **Stochastic:** has stochastic/random terms (think of Brownian motion)

What is it about?

Development of a structure-preserving idealized stochastic climate model

- ▶ Climate model: set of equations modeling climatic events/processes
  - ▶ Our model: simulates ocean-atmosphere interactions
- ▶ Idealized: we make approximations!
  - ▶ 2D model: solves for velocity, temperature, and pressure
- ▶ Stochastic: has stochastic/random terms (think of Brownian motion)
- ▶ Structure-preserving: preserves underlying geometric and physical structure

What is it about?

Development of a structure-preserving idealized stochastic climate model

- ▶ **Climate model:** set of equations modeling climatic events/processes
    - ▶ Our model: simulates ocean-atmosphere interactions
- ▶ **Idealized:** we make approximations!
    - ▶ 2D model: solves for velocity, temperature, and pressure
- ▶ **Stochastic:** has stochastic/random terms (think of Brownian motion)
- ▶ **Structure-preserving:** preserves underlying geometric and physical structure
- ▶ **Development:** modeling, analysis, and simulation

What is it about?

Development of a **structure-preserving** idealized stochastic climate model

- ▶ **Climate model:** set of equations modeling climatic events/processes
  - ▶ Our model: simulates ocean-atmosphere interactions
- ▶ **Idealized:** we make approximations!
  - ▶ 2D model: solves for velocity, temperature, and pressure
- ▶ **Stochastic:** has stochastic/random terms (think of Brownian motion)
- ▶ **Structure-preserving:** preserves underlying geometric and physical structure
- ▶ **Development:** modeling, analysis, and simulation

We are solving stochastic PDEs which model ocean-atmosphere interactions!
